Experiences From Allowing Maximum Two Contract Tiers in the Vertical Supply Chain

Beate Aure, Ola Lædre and Jardar Lohne
Department of Civil and Environmental Engineering, Norwegian University of Science and Technology (NTNU), Trondheim, Norway
Introduction

• Earlier measures taken have not prevented an escalation of criminal activities over the last two decades in the Norwegian AEC-industry

• Construction projects have peculiar characteristics rendering them vulnerable for work related crime.

• The Norwegian Government presented in January 2015 a strategy to combat work related crime and resulted in a requirement that restricts the number of contract tiers in construction projects.
Method

Research Questions

• How do contractors satisfy the requirement of maximum two contract tiers?

• What challenges entail the requirement of maximum two contract tiers for the contractors?

Research Method

• Scoping Literature review

• Six semi-structured interviews (three companies; safety, health and working environment advisors, project managers and advisors in the field of seriousness follow-up)
Results and discussion

- Measure was intended to create better control and follow-up opportunities for the main contractors.
- «HMSREG» (HSE-Registration) is considered the most important tool and help device that is used in the Norwegian AEC-industry today.
- It is still experienced some challenges associated with following up on the sub-sub-contractor.
- A closer and more directly contractual relationship between main contractor and sub-contractors should make it easier.
Conclusion

How do contractors satisfy the requirement of maximum two contract tiers?

- With help from the data program «HMSREG» (HSE-registration)
- A shorter supply chain can prevent hidden crime from appearing down in the chain
- Must be supplemented with other tools to be able to fill its purpose as a whole

What challenges entail the requirement of maximum two contract tiers for the contractors?

- The overall experiences with the requirement are positive.
- Only challenged when there is need for specialist competence or specialist equipment
- Still some communication difficulties with securing the contract and seriousness requirements down the contract chain
- The requirement cleans up a long and messy vertical chain
